

ENTROPION

Meaning: Entropion is a medical condition where the eyelid folds inward, potentially leading to discomfort and irritation of the eye.

1. Entropion can cause significant discomfort if left untreated, as the eyelid turns inward.
2. Veterinarians often see entropion in certain dog breeds, particularly those with loose skin.
3. Surgical intervention is commonly recommended for patients suffering from severe entropion.
4. The condition can lead to corneal ulcers and other complications if the eyelashes rub against the eye.
5. Regular eye examinations are vital for early detection and management of entropion.
