EPIGLOTTIC

Meaning: Epiglotic refers to anything related to the epiglottis, a flap of tissue that covers the windpipe during swallowing to prevent food and liquids from entering the airway.

1. The epiglottic fold can sometimes become inflamed during severe allergic reactions.
2. In anatomical studies, the epiglottic structure plays a crucial role in protecting the airway during swallowing.
3. Surgeons must carefully navigate around the epiglottic region to avoid complications during throat procedures.
4. Understanding the epiglottic anatomy is essential for professionals working in respiratory therapy.
5. The epiglottic movement is vital for the proper closure of the windpipe while eating or drinking.
