

EPITHELIOID

Meaning: Epithelioid refers to cells that resemble epithelial cells, often characterized by a polygonal shape and found in granulomas, playing a significant role in immune responses and tissue reactions.

1. The epithelioid cells in the granuloma play a crucial role in the immune response.
2. Researchers noted the presence of epithelioid features in the tissue samples obtained from the biopsy.
3. Epithelioid morphology is often associated with specific types of inflammatory conditions.
4. The pathologist identified epithelioid granulomas as a key indicator of sarcoidosis in the patient.
5. In certain tumors, the presence of epithelioid cells can suggest a more aggressive form of cancer.
