

EQUINOX

Meaning: Equinox: the time of year when the sun crosses the celestial equator, resulting in nearly equal lengths of day and night, typically occurring in spring and autumn.

1. The spring equinox marks the moment when day and night are of nearly equal length.
2. Many cultures celebrate the equinox as a time of renewal and balance in nature.
3. Astronomers use the equinox to define the start of the astronomical seasons.
4. During the autumn equinox, the harvest festivals are often held to give thanks for the crops.
5. The equinox is a fascinating phenomenon that occurs twice a year, in March and September.
