EROSION

Meaning: Erosion is the process by which natural forces, such as water or wind, gradually wear away soil, rock, or landforms, leading to significant changes in the landscape.

1. Erosion along the coastline has dramatically altered the landscape over the past few decades.
2. The scientists conducted a study to assess the impact of soil erosion on agricultural productivity.
3. Heavy rainfall can accelerate erosion, leading to significant loss of topsoil in vulnerable areas.
4. The river's erosion carved out deep gorges, creating stunning views for hikers and nature lovers.
5. Conservation efforts are essential to mitigate the effects of erosion and protect natural habitats.
