

ETHENYL

Meaning: Ethenyl refers to a chemical group ($-C_2H_3$) derived from ethylene, commonly involved in the synthesis of organic compounds and the production of plastics through polymerization.

1. Ethenyl groups are commonly used in the synthesis of various organic compounds.
2. The polymerization of ethenyl compounds can lead to the formation of durable plastics.
3. In the laboratory, ethenyl derivatives are often employed as intermediates in chemical reactions.
4. The presence of ethenyl in the molecular structure can significantly influence the reactivity of a compound.
5. Researchers are exploring new applications for ethenyl-based materials in the field of nanotechnology.
