

# ETHERIZATION

*Meaning: Etherization is the administration of ether as an anesthetic to induce loss of sensation or consciousness during surgical procedures.*

1. Etherization was commonly used in the 19th century to facilitate painless surgeries.
2. The process of etherization allowed doctors to perform complex procedures without causing patients distress.
3. After careful consideration, the surgical team opted for etherization to ensure the patient remained unconscious throughout the operation.
4. Etherization played a pivotal role in the advancement of modern anesthesia practices.
5. While effective, etherization was soon replaced by safer and more effective anesthetic agents.
