

EUPLECTELLA

Meaning: Euplectella is a genus of deep-sea glass sponges characterized by their intricate siliceous skeletal structures and longevity.

1. Euplectella is often referred to as the glass sponge due to its delicate skeletal structure.
2. Scientists have discovered that Euplectella can live for thousands of years, making it one of the longest-lived marine species.
3. The unique shape of Euplectella helps it filter water and capture nutrients in its deep-sea habitat.
4. Euplectella is known for its symbiotic relationship with certain species of shrimp, which find refuge within its skeleton.
5. Research on Euplectella contributes to our understanding of deep-sea ecosystems and their biodiversity.
