

EUTROPHY

Meaning: Eutrophy refers to the condition of being rich in nutrients, particularly in aquatic ecosystems, which often results in increased biological productivity, such as algae growth.

1. Eutrophy in freshwater lakes often leads to an increase in algae growth.
2. The concept of eutrophy is critical for understanding nutrient cycling in ecosystems.
3. Eutrophy can significantly alter the balance of aquatic life in a given habitat.
4. Efforts to manage eutrophy include reducing nutrient runoff from agricultural areas.
5. Restoring eutrophic lakes may require comprehensive strategies to improve water quality.
