

EVAPORATION

Meaning: Evaporation is the process by which a liquid turns into vapor, often occurring when heat is applied.

1. Evaporation is a crucial process in the water cycle, allowing water to transform from liquid to vapor.
2. On a hot day, the rapid evaporation of sweat helps to cool down the body.
3. The scientist explained how evaporation contributes to the formation of clouds in the atmosphere.
4. Through evaporation, lakes and rivers can lose significant amounts of water during dry seasons.
5. The efficiency of the evaporation process can be influenced by factors such as temperature and humidity.
