

EVOLUTION

Meaning: Evolution is the process through which species undergo gradual change over time, often driven by natural selection, leading to the diversity of life.

1. The theory of evolution explains how species change over time through natural selection.
2. Many scientists believe that understanding evolution is crucial for grasping the diversity of life on Earth.
3. Evolution has led to remarkable adaptations in organisms, allowing them to thrive in various environments.
4. The fossil record provides significant evidence supporting the processes of evolution across millions of years.
5. Cultural evolution can be seen in the way human societies adapt and change through shared knowledge and experiences.
