

EXARTICULATION

Meaning: Exarticulation is the surgical removal of a limb at the joint, often due to severe injury or infection.

1. Exarticulation of the limb can lead to significant mobility challenges for the patient.
2. The surgeon explained that exarticulation might be necessary if the infection spread further.
3. In rare cases, exarticulation is performed to relieve severe pain in patients with chronic conditions.
4. The term exarticulation is often used in medical literature to describe the removal of an entire limb at the joint.
5. After the accident, the doctors discussed the potential need for exarticulation to save the patient's life.
