

EXCITATOR

Meaning: Excitator: a substance or device that stimulates or enhances activity in biological systems, such as neural pathways or muscle contractions.

1. The excitator in the experiment effectively stimulated the neural pathway in the subjects.
2. Researchers are investigating how the excitator influences muscle contraction during exercise.
3. In the context of neuroscience, an excitator can enhance synaptic transmission and promote learning.
4. The device acted as an excitator, triggering the desired response in the biological tissue.
5. Understanding the role of the excitator is crucial for developing new therapies for neurological disorders.
