

EXSICCATION

Meaning: Exsiccation refers to the process of drying out or removing moisture from a substance, particularly in the context of soil or biological materials.

1. The exsiccation of the soil during the drought caused a significant decline in crop yields.
2. Scientists studied the exsiccation process to understand how certain plants adapted to arid environments.
3. After weeks without rain, the exsiccation of the riverbed revealed ancient artifacts long buried beneath the sediment.
4. The exsiccation of food products is a common method used to prolong shelf life and prevent spoilage.
5. In laboratories, researchers often simulate exsiccation to test the stability of various compounds under dry conditions.
