

EXTERNALISM

Meaning: Externalism is the philosophical theory that emphasizes the role of an individual's external environment and context in shaping their mental states and knowledge.

1. Externalism posits that the context of an individual's environment can significantly influence their mental states.
2. In philosophy, externalism challenges the notion that knowledge is solely a product of internal mental processes.
3. The debate between internalism and externalism has profound implications for understanding personal identity.
4. Externalism can be seen in social theories that emphasize the role of societal factors in shaping individual beliefs.
5. Critics of externalism argue that it overlooks the importance of personal introspection and individual reasoning.
