

EXTRATROPICAL

Meaning: Extratropical refers to weather systems, such as storms or cyclones, that occur outside the tropics, typically characterized by their formation along frontal boundaries and associated with mid-latitude weather patterns.

1. Extratropical storms often bring heavy rainfall and strong winds to coastal regions.
2. The climatologist explained how extratropical cyclones differ from tropical storms in their formation.
3. Understanding the behavior of extratropical weather patterns is crucial for accurate forecasting.
4. Extratropical systems can influence temperature and precipitation far from their origin.
5. Many regions experience seasonal changes due to the migration of extratropical fronts.
