

EXTRUSIVE

Meaning: Extrusive refers to volcanic rock or processes that occur when magma erupts onto the Earth's surface and cools rapidly.

1. Extrusive volcanic rock forms when lava cools quickly upon reaching the Earth's surface.
2. The landscape was shaped by extrusive processes, creating dramatic cliffs and valleys.
3. Geologists study extrusive igneous formations to understand the history of volcanic activity in the region.
4. Extrusive materials can often be identified by their fine-grained texture and lack of large crystals.
5. The presence of extrusive lava flows indicates a relatively recent volcanic eruption in the area.
