

EXTUBERATION

Meaning: Extubération is the process of removing a tube that has been inserted into a patient's airway to facilitate breathing, typically following surgery or mechanical ventilation.

1. Extubération is a critical step in the recovery process for patients who have undergone surgery requiring mechanical ventilation.
2. The medical team carefully monitored the patient's condition during extubération to ensure safety and comfort.
3. After the extubération, the doctors observed the patient for any signs of respiratory distress.
4. Successful extubération often leads to improved patient morale and a quicker return to normal activities.
5. The procedure for extubération must be followed meticulously to avoid complications such as airway obstruction.
