

FILAMENT

Meaning: Filament: a slender, thread-like structure or strand, often found in natural forms such as spider webs or within living organisms.

1. The delicate filament of the spider's web shimmered in the morning dew.
2. Bioluminescent organisms often contain a filament that emits light in the dark ocean depths.
3. A filament bulb provides a warm glow that many people find comforting in their homes.
4. The scientist examined the thin filament under a microscope to study its structure.
5. In some plants, the filament supports the anther, which holds the pollen.
