

FISSIPATION

Meaning: Fissipation refers to the process of division or fragmentation into smaller parts or groups, often resulting in a diversity of ideas or biological structures.

1. Fissipation within the group led to a fragmentation of ideas and beliefs.
2. The scientist explained that fissipation in cell biology is a crucial process for organism growth.
3. As the fissipation of the once-unified movement became evident, many members chose to leave.
4. The concept of fissipation can also be applied metaphorically to social structures undergoing change.
5. In ecology, fissipation describes how species can diverge and adapt to different environments over time.
