

FLEXURAL

Meaning: Flexural refers to the ability of a material or structure to resist bending or flexing under applied loads.

1. The engineer conducted a series of tests to determine the flexural strength of the new composite material.
2. In architecture, flexural design is crucial for ensuring that structures can withstand bending forces.
3. The flexural properties of the beam were analyzed to assess its performance under load.
4. Flexural fatigue can lead to material failure in components subjected to cyclic bending stresses.
5. The researchers published their findings on the flexural behavior of reinforced concrete in a leading engineering journal.
