

# FLOCCULATION

*Meaning: Flocculation is the process by which fine particulates agglomerate into a floc, facilitating their removal from a liquid, particularly in water treatment.*

1. Flocculation is a crucial process in water treatment to remove suspended particles.
2. The scientists observed flocculation occurring when the chemicals were added to the solution.
3. During the experiment, the flocculation of the sediment indicated a successful reaction.
4. Flocculation can enhance the efficiency of solid-liquid separation techniques.
5. Understanding flocculation is essential for improving the quality of various industrial processes.
