

FLUOROSCOPE

Meaning: A fluoroscope is a medical imaging device that uses X-rays to produce real-time moving images of internal structures, often used to examine the function of organs and monitor procedures.

1. The doctor used a fluoroscope to examine the patient's gastrointestinal tract in real-time.
2. During the procedure, the fluoroscope allowed the technician to monitor the movement of the contrast agent.
3. Fluoroscopes are essential tools in interventional radiology for guiding various minimally invasive procedures.
4. The use of a fluoroscope in the operating room enhanced the surgeon's ability to visualize internal structures.
5. Training on the proper use of a fluoroscope is crucial for ensuring patient safety during radiographic examinations.
