

# FORMICATION

*Meaning: Formication is the sensation of feeling insects crawling on or under the skin, often causing distress or discomfort.*

1. Formication can create a distressing sensation that leads individuals to believe they are being touched by insects.
2. The patient described a strong feeling of formication, particularly in her lower legs during the night.
3. Doctors often encounter cases of formication in patients experiencing withdrawal from certain substances.
4. Although formication is not a common symptom, it can be indicative of underlying neurological conditions.
5. She found the formication so unsettling that she sought help from a therapist to cope with the experience.
