

FOSSILIZATION

Meaning: Fossilization is the process by which organic material is preserved over time through specific environmental conditions, resulting in fossils.

1. Fossilization is a rare process that requires specific environmental conditions to preserve organic material.
2. Scientists study fossilization to understand the Earth's history and the evolution of life.
3. The fossilization of dinosaur bones can provide invaluable insights into their behavior and habitat.
4. Not all organisms undergo fossilization; soft-bodied creatures are often lost to decay before they can be preserved.
5. Recent discoveries have shed light on the complex mechanisms involved in the fossilization process.
