

# FRICATION

*Meaning: Frication is the process of friction occurring between two surfaces in contact, leading to heat generation and material wear.*

1. Frication occurs when two surfaces rub against each other, generating heat and wear.
2. The engineer explained that frication can significantly affect the efficiency of mechanical systems.
3. Understanding the principles of frication is crucial for designing better braking systems in vehicles.
4. The scientist conducted experiments to measure the frication between various materials under different conditions.
5. In art, the frication of paint on canvas can create unique textures and depth in a painting.
