

FRICTION

Meaning: Friction is the resistance encountered when one surface moves over another, often resulting in heat and affecting motion.

1. Friction between the two surfaces created enough heat to cause a small fire.
2. The scientist explained how friction affects the motion of objects in her lecture.
3. As the car skidded on the wet road, the driver realized how crucial friction was for safety.
4. Their differing opinions led to friction in the workplace, making collaboration difficult.
5. Reducing friction in machinery can significantly improve efficiency and performance.
