

# FUMIGATION

*Meaning: Fumigation is the process of using chemical vapors to disinfect or eliminate pests from an enclosed space, such as stored grains.*

1. Fumigation is often used to eliminate pests in stored grains.
2. The fumigation process requires sealing the area to contain the gases effectively.
3. After the fumigation treatment, it is crucial to ventilate the space before re-entry.
4. Many homeowners choose fumigation as a last resort for severe termite infestations.
5. Regulatory agencies have strict guidelines to ensure safe fumigation practices are followed.
