FURCATION

Meaning: Furcation refers to the point at which a structure, such as a river or the roots of a tooth, divides into two or more branches or parts.

1. The furcation of the river created two distinct channels that flowed in opposite directions.

2. During the dental examination, the dentist noted the furcation of the molar roots as a potential area of concern.

3. The researchers studied the furcation patterns of the branches to understand the tree's growth habits.

4. In biology, furcation refers to the point where a structure divides into two or more branches, like in the case of certain blood vessels.

5. The architectural design featured a unique furcation that allowed for an innovative use of space and light.
