

FUSEL

Meaning: Fusel refers to a group of higher alcohols produced during fermentation, often associated with a strong odor and undesirable taste in poorly distilled alcoholic beverages.

1. The strong smell of fusel emanated from the poorly distilled liquor.
2. After a long night of sampling various spirits, the fusel oils became noticeable in the aftertaste.
3. Craft distillers often struggle to minimize fusel alcohols in their products to improve quality.
4. Some connoisseurs believe that a small amount of fusel can add complexity to the flavor profile.
5. The chemist explained how fusel is formed during fermentation and its effects on taste.
