

GEMMULATION

Meaning: Gemmulation is a method of asexual reproduction in which certain organisms, such as freshwater sponges, produce dormant buds to endure adverse environmental conditions.

1. Gemmulation is a fascinating form of asexual reproduction observed in certain freshwater sponges.
2. The process of gemmulation allows organisms to survive harsh environmental conditions by producing dormant buds.
3. Researchers studying gemmulation have discovered its significance in the life cycle of specific aquatic species.
4. Understanding gemmulation can provide insights into evolutionary adaptations among different organisms.
5. In laboratory experiments, scientists have successfully induced gemmulation in sponges to observe their regeneration capabilities.
