

GEODESIC

Meaning: Geodesic: a curved line that represents the shortest distance between two points on a surface, often used in architecture and mathematics, such as in the design of a geodesic dome.

1. The architect designed the building using a geodesic dome to maximize energy efficiency.
2. In mathematics, a geodesic is the shortest path between two points on a curved surface.
3. The geodesic network of roads allowed for efficient travel across the mountainous region.
4. Her research focused on the applications of geodesic structures in modern engineering.
5. The team used a geodesic model to simulate the dynamics of the ecosystem effectively.
