

GEO THERMOMETER

Meaning: A geothermometer is an instrument used to measure the temperature of geothermal systems or heat flow in geological contexts.

1. The geothermometer indicated a significant temperature increase at the geothermal site.
2. Researchers relied on the geothermometer to assess the heat flow in the volcanic region.
3. By using a geothermometer, scientists can accurately measure subsurface temperatures.
4. The geothermometer proved essential in evaluating the potential for geothermal energy extraction.
5. During the field study, we calibrated the geothermometer to ensure precise temperature readings.
