

GEOTROPISM

Meaning: Geotropism is the growth response of plants to gravity, directing roots downward and stems upward.

1. Geotropism is a critical factor in how plants orient their roots and stems.
2. The phenomenon of geotropism allows plants to grow downward in search of nutrients and water.
3. In geotropism, gravity plays a significant role in determining the direction of plant growth.
4. Researchers studied how different species exhibit varying rates of geotropism under controlled conditions.
5. Understanding geotropism can help scientists improve agricultural practices and crop yields.
