

GERMINATION

Meaning: Germination is the process by which a seed develops into a new plant, beginning with the sprouting of the seed and leading to the formation of a seedling.

1. Germination is a crucial phase in the life cycle of plants, marking the transition from seed to seedling.
2. The gardener monitored the soil temperature and moisture to ensure optimal conditions for germination.
3. After several days of careful watering, the seeds finally showed signs of germination, sprouting tiny green shoots.
4. Understanding the process of germination can greatly improve agricultural yields and crop management.
5. Factors such as light, temperature, and water availability play significant roles in the success of germination.
