

GLACIATION

Meaning: Glaciation is the process by which large areas of the Earth's surface are covered by ice sheets and glaciers, significantly altering the landscape and climate over time.

1. Glaciation has shaped the landscape of many regions, creating valleys and fjords.
2. The study of glaciation provides insights into past climate conditions and ice sheet dynamics.
3. During the last glaciation, large portions of North America were covered by thick ice sheets.
4. Scientists are investigating the effects of glaciation on global sea levels and ecosystems.
5. As temperatures rise, the remnants of past glaciation are becoming increasingly visible in the meltwater.
