

GLACIER

Meaning: A glacier is a large, slow-moving mass of ice formed from compacted snow, typically found in polar regions or mountainous areas, that shapes the landscape as it advances.

1. The glacier slowly carved its way through the valley, shaping the landscape over millennia.
2. Scientists are studying the melting glacier to understand the impacts of climate change on sea levels.
3. Tourists flock to the national park to witness the stunning blue ice of the ancient glacier.
4. As the sun rose, the glacier shimmered with a brilliant light, creating a breathtaking view.
5. Hikers must navigate carefully around the crevasses that form in the shifting glacier.
