

GLACIS

Meaning: Glacis: a sloped earthwork or bank in military fortifications designed to protect against enemy fire and facilitate defense.

1. The fortifications were designed with a glacis to provide a sloping defense against attackers.
2. In military architecture, the glacis serves to absorb the impact of artillery fire.
3. The glacis of the castle was overgrown with wildflowers, creating a picturesque yet strategic landscape.
4. During the siege, the soldiers relied heavily on the protective features of the glacis for their defense.
5. Archaeologists discovered remnants of a glacis, revealing insights into the fortification techniques of ancient civilizations.
