

GLOTTAL

Meaning: Glottal refers to sounds or articulations produced in the glottis, particularly the glottal stop, which is a phonetic feature in certain dialects of languages.

1. The glottal stop is a common phonetic feature in many dialects of English.
2. In some accents, the glottal sound replaces the 't' in words like "butter."
3. Linguists study glottalization to understand the variations in speech patterns.
4. Children often experiment with glottal sounds as they learn to speak.
5. The glottal fricative can be found in several languages outside of English.
