

GLYCOLYL

Meaning: Glycolyl refers to a functional group or derivative derived from glycolic acid, typically characterized by the presence of the glycolyl moiety in organic synthesis and biochemical applications.

1. Glycolyl groups are often involved in various organic synthesis reactions.
2. The research focused on the biochemical properties of glycolyl derivatives.
3. In the lab, we synthesized a new compound that featured a glycolyl moiety.
4. Glycolylation can significantly alter the pharmacokinetic properties of a drug.
5. The study explored the role of glycolyl in metabolic pathways related to energy production.
