GRANULIFORM

Meaning: Granuliform refers to a texture or appearance characterized by small, grain-like particles or granules.

1. The mineral exhibited a granulosity that made it appear granuliform under the microscope.

2. In the lab, researchers classified the sediment as granuliform due to its consistent particle size.

3. The granules of the substance were so small and uniform that they were often described as granuliform.

4. During the analysis, the granulating process resulted in a granuliform texture that enhanced the material's properties.

5. The scientist noted that the granulation was not just random, but distinctly granuliform, indicating a specific formation process.
