

GRAVITATION

Meaning: Gravitation is the natural phenomenon by which objects with mass are attracted to one another, influencing their motion and positioning in space.

1. Gravitation is a fundamental force that governs the motion of planets in our solar system.
2. The concept of gravitation was famously explained by Sir Isaac Newton in the 17th century.
3. Understanding gravitation is essential for the study of astrophysics and cosmology.
4. The effects of gravitation can be observed in everyday life, from falling objects to the tides.
5. Einstein's theory of general relativity redefined our understanding of gravitation and its relationship with space-time.
