

GRAVITY

Meaning: Gravity is the natural force that attracts objects with mass toward one another, particularly the force that keeps celestial bodies in orbit.

1. Gravity is the force that keeps the planets in orbit around the sun.
2. Without gravity, our bodies would not be able to function as they do on Earth.
3. Scientists have long studied gravity to understand its effects on time and space.
4. The concept of gravity was famously illustrated by Newton's apple falling from a tree.
5. Astronauts in space experience a sensation of weightlessness because of reduced gravity.
