

GYMNOSPERMOUS

Meaning: Gymnospermous refers to plants, particularly trees, that produce seeds not enclosed in an ovary, typically characterized by needle-like leaves and including species like pines and spruces.

1. The gymnospermous trees in the forest are known for their needle-like leaves.
2. Many gymnospermous species, such as pines and spruces, thrive in colder climates.
3. Botanists often study gymnospermous plants to understand the evolution of seed-bearing organisms.
4. The gymnospermous family includes some of the oldest living trees on Earth, such as the ginkgo.
5. During the lecture, we learned that gymnospermous plants reproduce through exposed seeds rather than fruits.
