

HALATION

Meaning: Halation is the phenomenon in photography where light spreads beyond its intended area, creating a glowing or soft effect around bright objects in an image.

1. Halation can create a dreamy effect in photographs, enhancing the ethereal quality of the image.
2. The film's unique halation added a layer of depth that captivated the audience.
3. Photographers often experiment with halation to produce striking contrasts in their work.
4. In the digital age, understanding halation can help artists replicate classic film aesthetics.
5. Halation occurs when light scatters around bright objects, giving a soft glow to the edges.
