

HELIUM

Meaning: Helium is a colorless, odorless, inert gas that is lighter than air and has a low boiling point, commonly used in balloons and as a cooling agent in scientific applications.

1. Helium is lighter than air, which is why it can make balloons float.
2. In scientific research, helium is often used as a cooling agent due to its low boiling point.
3. The party became more festive when we filled the room with helium-filled balloons.
4. Helium is a non-renewable resource, primarily extracted from natural gas fields.
5. Many people love to speak in a high-pitched voice after inhaling helium from a balloon.
