

HEMATITIC

Meaning: Hematitic refers to a reddish-brown coloration or characteristic associated with the mineral hematite, often indicating iron oxide presence in geological contexts.

1. The mineral samples collected from the site showed a striking hematitic coloration.
2. In geology, hematitic iron is often associated with oxidized environments.
3. The artist used hematitic pigment to achieve a rich, earthy tone in the painting.
4. Geologists often analyze hematitic formations to understand past environmental conditions.
5. The hematitic layers in the rock suggested a history of volcanic activity in the region.
