

HEMATOCELE

Meaning: Hematocele is a medical condition characterized by the accumulation of blood in the tunica vaginalis of the scrotum, often resulting in swelling.

1. The patient was diagnosed with a hematocele after presenting with severe scrotal swelling.
2. In cases of trauma, a hematocele can form when blood accumulates in the tunica vaginalis.
3. Healthcare providers should monitor a hematocele closely to prevent complications such as infection.
4. The ultrasound revealed a hematocele, prompting further evaluation by a urologist.
5. Treatment options for a hematocele may include aspiration or surgical intervention if it persists.
