

# HEMISECTION

*Meaning: Hemisection is a surgical procedure that involves the removal of one half of a tooth, typically to treat severe dental issues while preserving the remaining portion.*

1. Hemisection is a surgical procedure often used to treat severe dental issues.
2. The dentist explained that a hemisection could save the tooth by removing only the affected root.
3. After the hemisection, the patient was relieved to know that the rest of the tooth could still function.
4. In some cases, hemisection is favored over extraction to preserve the natural tooth structure.
5. Following the hemisection, the recovery process involved careful monitoring of the surgical site.
