

HOGNOSESNAKE

Meaning: A hognose snake is a non-venomous snake characterized by its upturned snout and burrowing behavior, commonly found basking in warm environments.

1. The hognose snake is known for its distinctive upturned snout, which aids in digging.
2. During the warm months, hognose snakes can often be found basking in the sun.
3. When threatened, a hognose snake may flatten its neck and hiss dramatically to deter predators.
4. These snakes are non-venomous and often play dead as a defense mechanism.
5. Hognose snakes have a varied diet, primarily feeding on toads and small rodents.
